

Downtown Madison Revitalization

Madison, New Jersey

A master planning study was done for the revitalization of the downtown business district, including an analysis of the existing conditions and recommendations for visual and physical improvements. A landscape vocabulary was developed and final plans for downtown improvements were developed. Plans included a reorganization of the sidewalk layout and the locations of amenities, such as benches and lighting, widening sidewalks in areas to give pedestrians additional space, improvements to parking lots, the installation of a large number of street trees, signage, granite curbing, and special pavements in the downtown area.
